Duni launches a revolutionary new tablecovering material

A new star is born. It is called Evolin™ – the evolution of linen. Evolin™ is an innovation that for the first time combines single use convenience with the premium look and feel of linen. Evolin will free up time, increase flexibility and save money without compromising on quality.

Evolin is one of its kind. It is a truly unique product made to the highest standards and developed in cooperation with some of Europe's best restaurateurs. With its unique combination of single-use convenience and linen look and feel, it can shake up the tablecovering market. This is the alternative to linen that the market has been looking for.

Using Evolin gives the advantage of more time, increased flexibility and less worry. Supply will be in the cupboards when needed, clean and ready to use with consistent quality. As an added benefit - the tables will be in perfect symmetry with identical shapes and lines. In addition Evolin is a smart financial and environmental choice. There will be no need to pay for extra stock or paying for any surprises and after use there are several environmentally responsible options for the disposal. Evolin is made from renewable materials and complies with the European standards for compostability (EN 13432).

Join the evolution by checking out www.evolutionoflinen.com and hear what our ambassadors have to say about Evolin™. You can also sign up to be a test customer and the first to use Evolin™.

Get ready to be part of the tablecovering evolution!
